

Keyline Technologies — Project Apollo Risk Register

Classification: PROJECT CONFIDENTIAL • Access: Apollo Project Members and Managers

Risk R-001 — Unauthorized Retrieval

- Severity: Critical.
- Description: A retrieval query could return passages from documents the requesting user is not allowed to access.
- Owner: Priya Menon.
- Mitigation: Apply tenant and role permission filters before passages reach the generation layer.

Risk R-002 — Hallucinated Answers

- Severity: High.
- Description: The model may generate unsupported information when retrieved evidence is insufficient.
- Owner: Daniel Kumar.
- Mitigation: Require grounded answers, show source excerpts, and return an explicit 'not found' response when evidence is unavailable.

Risk R-003 — Stale Documents

- Severity: Medium.
- Description: Users may receive answers based on outdated policies or reports.
- Owner: Aisha Rahman.
- Mitigation: Store document version and update metadata and periodically re-index changed documents.

Risk R-004 — Slow Retrieval

- Severity: Medium.
- Description: Large document collections may increase search latency.
- Owner: Arjun Shah.
- Mitigation: Tune indexing, limit retrieved passages, and measure query latency.

Risk R-005 — Incorrect Permission Metadata

- Severity: High.
- Description: Incorrect role or document metadata could expose restricted content.
- Owner: Priya Menon.
- Mitigation: Validate permission metadata during upload and run automated access-control tests.

Demo dataset for the Keyline permission-aware RAG project. All names, figures, and company information are fictional.
